The Internal Family Systems Model

Internal Family SystemsSM is at the forefront of a movement toward a more collaborative therapeutic approach that relies on clients' intuitive wisdom. IFSSM offers a clear, non-pathologizing, and empowering view of human cognitive and emotional life and provides a dynamic therapeutic approach that allows both therapist and client to enter into a transformational relationship in which healing can occur.

Richard C. Schwartz, PhD, has been developing the IFS model for more than 30 years, with IFS now practiced by thousands of licensed therapists and other professionals throughout the United States and internationally. Mental health care professionals and others trained in the IFS model can easily integrate it into a wide variety of practices using the unique methods IFS offers to create safe environments for clients to become Self-transforming. Internal Family Systems therapy is a simple yet sophisticated integration of psychology, spirituality, and intra-psychic and family systems theory that:

*Richard C.
Schwartz*

- Works well with couples, families, groups, and children;
- Can effectively treat trauma;
- Is a client-led approach that respects each client's pace and goals;
- Establishes a productive, trusting, and collaborative partnership between therapist and client;
- Helps therapists remain centered and open-hearted.

Internal Family Systems: An Evidence-Based Practice

Internal Family Systems (IFS) is now posted on NREPP as an evidence-based practice. NREPP is the National Registry for Evidence-Based Programs and Practices, a national repository that is maintained by the U.S. government's Substance Abuse and Mental Health Services Administration (SAMHSA). Interventions listed in NREPP have been subject to independent, rigorous scrutiny, and are deemed to show significant impact on individual outcomes relating to mental health.

As a clinical treatment, IFS has been rated effective for improving general functioning and well-being. In addition, it has been rated promising for improving phobia, panic, and generalized anxiety disorders and symptoms; physical health conditions and symptoms; personal resilience/self-concept; and depression and depressive symptoms.

These scientific findings and the listing of IFS on NREPP affirm the vast potential of IFS therapy for advancing emotional healing and mental well-being. In particular, they indicate promising effects on mind (depression, anxiety), body (physical health conditions), and spirit (personal resilience and self-concept).
